DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

Content of Specification

- (j) Claim or Claims: See 37 CFR 1.75 and MPEP § 608.01(m). **The claim or claims must commence on separate sheet or electronic page (37 CFR 1.52(b)(3)).** Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. There may be plural indentations to further segregate subcombinations or related steps. See 37 CFR 1.75 and MPEP § 608.01(i)-(p).

Appropriate correction is required.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “**plurality of wedge-shaped cams**” must be shown or the feature(s) canceled from the claims 1-4. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must

be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 1-4 are objected to because of the following informalities:

Claims 1-4 recite the limitation "the first hinge pin or said first hinge pin" throughout the claims. There is insufficient antecedent basis for this limitation in the claims. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by FR002619152 to Tordo et al. Tordo et al discloses a hinge assembly comprising;

a hinge pin (14) with a first axial region (5) and a first hinge plate (6), the hinge pin and first hinge plate having mutually matching profiles in the form of a plurality wedge-shaped cams

Art Unit: 3677

or vertical rib members (Figs. 1, 4 and 5) in an interior face of the axial region which protrude radially inward; the matching profiles are offset in a circumferential direction with taper angles (spaces between each vertical rib) onto the cylindrical surface of the axial region, wherein the hinge pin has a second axial region (8) and a second hinge plate (frame/jamb), the second axial region and an end of the hinge pin having mutually matching second profiles (12, 17, 18) adapted to be releasable and to be held in captive engagement.

As to claims 2 and 3, as seen in Fig. 4, the mutually matching second profiles between the hinge pin and second axial region may be in the form of a conical-shaped engagement end (18) or axial-shaped teeth engagement end (17).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In particular, Yoshimura et al, Brockhaus, Heyer and Evans all disclose hinge assemblies including a pintle or pin defining engagement profiles and/or specific longitudinal contours to limit movement between two hinged structures. These references may be used singly or in combination to meet the limitations of applicant's claims.
